Profile

I am a Computer Engineering graduate from IZTECH, certified in ISTQB Foundation Level, with a focus on software testing. During my studies, I actively participated in team projects, enhancing my communication and collaboration skills. Although I have limited hands-on experience, I am highly motivated to learn and apply my theoretical knowledge in practice. I am passionate about ensuring software quality and eager to contribute to innovative testing projects. With my solution-oriented mindset, I aim to contribute not only to my own development but also to the success of any team I join.

Professional Experience

Full Stack Developer (Erasmus+ Traineeship)
Maastricht University - Institute of Data Science

09/2025 – Present
Maastricht, Netherlands

I developed a full-stack web application for cardiovascular disease risk assessment using machine learning and explainable AI (SHAP). I implemented what-if analysis features that allow patients to compare risk scores by modifying clinical parameters. I also designed and integrated an AI chatbot based on a Retrieval-Augmented Generation (RAG) architecture, which answers patient case scenarios from a clinician's perspective using medical guidelines and scientific articles retrieved from PubMed. The frontend was built with Next.js (TypeScript) and the backend with Flask (Python), integrating RESTful APIs and scikit-learn models.

Software Test Engineer Intern
BeforeSunset AI

06/2024 – 10/2024
İzmir, Türkiye

I completed a Software Test Engineer internship at BeforeSunset AI, where I contributed to improving product quality and reliability. I conducted functional, design, and performance testing, identified and reported bugs, and collaborated with developers to resolve issues. Additionally, I optimized database queries to enhance application performance and gained hands-on experience in test automation, debugging, and QA best practices within an agile environment.

Test Camp Participant
Commencis

04/2025 – 05/2025
İzmir, Türkiye

I completed the 6-week Commencis Test Camp, where I gained hands-on experience in software testing, test techniques, test management tools, and CI/CD practices under the mentorship of experienced QA professionals.

Co-Founder and Former Board Member
İZTECH-Lösev Fayda Society

10/2024 – 07/2025
İzmir, Türkiye

I am a co-founder and former board member of the Lösev Fayda Community at IZTECH, where I served as Sponsorship Coordinator and Treasurer. I actively organized events and initiatives to support children with leukemia, while fostering social responsibility and community engagement among students.

Education

Bachelor's Degree / Computer Engineering (100% English)
İzmir Institute of Technology
Graduated with Honors, GPA: 3.01 / 4.00

09/2020 – 06/2025
İzmir, Türkiye

Skills

- Software Testing
 - API Testing (Postman)
 - Information Security
- Test Automation
 - Mobile Testing
 - React & HTML/CSS
- Test Management Tools
 - Project Management
 - Next.js & TypeScript
- Python
 - SQL
 - Teamwork/Collaboration

Projects

AI-Powered Clinical Decision Support Tool for Cardiovascular Risk Assessment

09/2025 – Present

Full-stack Developer

I am currently developing a cardiovascular disease risk prediction tool for leukemia patients by building a clinician-friendly interface and integrating large language models with clinical guidelines. I am creating a transparent decision support system using Logistic Regression with SHAP explanations to provide clinicians with interpretable insights for better patient care decisions, effectively bridging AI and healthcare.

Real-Time EV Charging Station Locator and Reservation System

09/2024 – 06/2025

Team Leader & Full-stack Developer & Software Test Engineer

I successfully developed a mobile web application that enables electric vehicle users to locate and reserve charging stations in real time. Working as the team leader and full-stack developer in a two-person team, I designed an intuitive UI, ensured seamless functionality, and conducted thorough QA testing. We implemented smart optimization algorithms that suggest ideal charging stations based on user preferences, traffic, and cost—enhancing efficiency and user satisfaction.

Machine Learning & Deep Learning

09/2024 – 06/2025

- Heart Disease Prediction  : Implemented regression models (linear, logistic, polynomial) on UCI heart disease data. Evaluated performance using MSE and accuracy.
- Text Classification  : Processed and balanced a medical text dataset. Trained SVM, Naïve Bayes, and Random Forest models, comparing performance via precision, recall, and F1-score.
- Image Clustering & Retrieval  : Applied PCA, t-SNE, and K-Means on chest X-ray images for feature reduction and clustering, building a query system for similar image retrieval.
- Transfer Learning for Animal Image Classification  : Developed CNN models using TensorFlow-Keras with transfer learning and data augmentation for multi-class animal image classification.

Smart Waste Monitoring System

01/2025 – 06/2025

Project Manager & Embedded Systems Developer & Mobile Developer & Software Tester

I developed a low-cost smart trash bin monitoring system using Arduino and Flutter. I integrated dual ultrasonic sensors and Bluetooth for real-time fill-level tracking. The system is designed to support sustainable waste management by reducing collection trips and preventing overflows through timely alerts and mobile app integration.

Online Internship Management System

10/2023 – 06/2024

Front-end Developer & Software Test Engineer

I contributed to designing a platform that simplifies the internship process for Computer Engineering students by automating documentation tasks and providing access to company postings. I helped create a user-friendly solution with efficient data management that reduces student workload and streamlines the entire internship experience.

BuildYourself

02/2024 – 06/2024

Full-stack Developer & Project Manager

I developed a mobile application for gym reservation. The app allows users to select the body part they plan to train on a human silhouette and view equipment availability and other users' workout plans during their selected time slots. This application improves the gym experience by optimizing time management and convenience for its users.

Awards

Fayda (Benefit) Community of the Year Award

05/12/2024

Foundation for Children with Leukemia (LÖSEV)

On December 5th, International Volunteer Day, our community was recognized as the FAYDA Community of the Year by the Foundation for Children with Leukemia (LÖSEV ) for our outstanding contributions to volunteerism and social responsibility among all FAYDA communities.

Certificates

ISTQB Foundation Level (CTFL)

Issued by Turkish Testing Board

Social Awareness and Leadership Certificate

Issued by IZTECH
