Profile

I am a Computer Engineering graduate from IZTECH, certified in ISTQB Foundation Level, with a strong focus on software testing and quality assurance. Throughout my academic journey, I developed a solid theoretical foundation in software engineering principles while actively participating in team projects that sharpened my communication, collaboration, and problem-solving skills. Although I am at an early stage of my professional career, I am highly motivated to bridge the gap between theory and practice, and I approach every learning opportunity with dedication and curiosity. I am passionate about ensuring software quality and eager to contribute to innovative testing projects where I can apply and expand my skill set. With a solution-oriented mindset and a genuine enthusiasm for continuous improvement, I aim to add value not only to my own professional growth but also to the success of any team I am part of.

Education

Bachelor's Degree / Computer Engineering (100% English)
Izmir Institute of Technology
Graduated with Honors, GPA: 3.01 / 4.00

09/2021 – 06/2025
İzmir, Türkiye

Professional Experience

Full Stack Developer (Erasmus+ Traineeship)
Maastricht University - Institute of Data Science
I developed an explainable AI-driven clinical decision support system for cardiovascular risk assessment in oncology patients, in collaboration with Dr. Chang Sun. I designed and implemented a full-stack solution that combines a Random Forest risk prediction model, SHAP-based explanations, and a multi-agent orchestration layer to provide transparent, evidence-based recommendations to clinicians. I integrated retrieval-augmented generation (RAG) on clinical guidelines and PubMed to complement model outputs with up to-date medical literature, while delivering an interactive web interface for real-time risk analysis and what-if scenario exploration.

09/2025 – 03/2026
Maastricht, Netherlands

Software Test Engineer Intern
BeforeSunset AI
I completed a Software Test Engineer internship at BeforeSunset AI, where I contributed to improving product quality and reliability. I conducted functional, design, and performance testing, identified and reported bugs, and collaborated with developers to resolve issues. Additionally, I optimized database queries to enhance application performance and gained hands-on experience in test automation, debugging, and QA best practices within an agile environment.

06/2024 – 10/2024
İzmir, Türkiye

Test Camp Participant
Commencis
I completed the 6-week Commencis Test Camp, where I gained hands-on experience in software testing, test techniques, test management tools, and CI/CD practices under the mentorship of experienced QA professionals.

04/2025 – 05/2025
İzmir, Türkiye

Co-Founder and Former Board Member
IZTECH-Lösev Fayda Society
I am a co-founder and former board member of the Lösev Fayda Community at IZTECH, where I served as Sponsorship Coordinator and Treasurer. I actively organized events and initiatives to support children with leukemia, while fostering social responsibility and community engagement among students.

10/2024 – 07/2025
İzmir, Türkiye

Skills

- Software Testing
 - API Testing (Postman)
 - Information Security
- Test Automation
 - Mobile Testing
 - React & HTML/CSS
- Test Management Tools
 - Project Management
 - Next.js & TypeScript
- Python
 - SQL
 - Teamwork/Collaboration

Projects

AI-Powered Clinical Decision Support Tool for Cardiovascular Risk Assessment

09/2025 – 03/2026

Full-stack Developer & Research Assistant

I built an end-to-end ML pipeline for cardiovascular disease risk prediction in CML patients on TKI therapy, combining a Random Forest model with SHAP-based explainability to generate feature-level attributions and human-readable explanations for clinicians. I designed a multi-agent orchestration framework routing queries to specialized agents — prediction, explanation, knowledge, and intervention — while integrating RAG on clinical guidelines and PubMed via a ChromaDB vector store to ground recommendations in up-to-date evidence. I delivered the system through a Next.js/TypeScript web application supporting real-time risk updates, what-if scenario exploration, and exportable reports, with all ML models served through a Flask REST API that processes patient data in memory to ensure privacy and robustness.

Real-Time EV Charging Station Locator and Reservation System

09/2024 – 06/2025

Team Leader & Full-stack Developer & Software Test Engineer

I successfully developed a mobile web application that enables electric vehicle users to locate and reserve charging stations in real time. Working as the team leader and full-stack developer in a two-person team, I designed an intuitive UI, ensured seamless functionality, and conducted thorough QA testing. We implemented smart optimization algorithms that suggest ideal charging stations based on user preferences, traffic, and cost—enhancing efficiency and user satisfaction.

Machine Learning & Deep Learning

09/2024 – 06/2025

- Heart Disease Prediction  : Implemented regression models (linear, logistic, polynomial) on UCI heart disease data. Evaluated performance using MSE and accuracy.
- Text Classification  : Processed and balanced a medical text dataset. Trained SVM, Naïve Bayes, and Random Forest models, comparing performance via precision, recall, and F1-score.
- Image Clustering & Retrieval  : Applied PCA, t-SNE, and K-Means on chest X-ray images for feature reduction and clustering, building a query system for similar image retrieval.
- Transfer Learning for Animal Image Classification  : Developed CNN models using TensorFlow-Keras with transfer learning and data augmentation for multi-class animal image classification.

Smart Waste Monitoring System

01/2025 – 06/2025

Project Manager & Embedded Systems Developer & Mobile Developer & Software Tester

I developed a low-cost smart trash bin monitoring system using Arduino and Flutter. I integrated dual ultrasonic sensors and Bluetooth for real-time fill-level tracking. The system is designed to support sustainable waste management by reducing collection trips and preventing overflows through timely alerts and mobile app integration.

Online Internship Management System

10/2023 – 06/2024

Front-end Developer & Software Test Engineer

I contributed to designing a platform that simplifies the internship process for Computer Engineering students by automating documentation tasks and providing access to company postings. I helped create a user-friendly solution with efficient data management that reduces student workload and streamlines the entire internship experience.

BuildYourself

02/2024 – 06/2024

Full-stack Developer & Project Manager

I developed a mobile application for gym reservation. The app allows users to select the body part they plan to train on a human silhouette and view equipment availability and other users' workout plans during their selected time slots. This application improves the gym experience by optimizing time management and convenience for its users.

Awards

Fayda (Benefit) Community of the Year Award

05/12/2024

Foundation for Children with Leukemia (LÖSEV)

On December 5th, International Volunteer Day, our community was recognized as the FAYDA Community of the Year by the Foundation for Children with Leukemia (LÖSEV ) for our outstanding contributions to volunteerism and social responsibility among all FAYDA communities.

Certificates

ISTQB Foundation Level (CTFL)

Issued by Turkish Testing Board

Social Awareness and Leadership Certificate

Issued by IZTECH
